|
|Yeah, I noticed that there is a satd dish on top of there compound. What's
|matter, haven't the feds any sharpshooters who can take out a feedhorn
|without making much noise? "Gee, that's a shame your satellite system
|broke. Is it under warranty?"
|

On the other hand, the news media indicate that the FBI has resorted to using stadium lights to intimidate the cult members and to keep them from being able to see outside at night.

I can't understand why a few well placed shots from a rifle or shotgun can't take out the stadium lights. That move wasn't well thought out.

OTOH, the fact that the cult members have not moved to do so indicates some measure of trying to avoid an escalation of conflict.

Tatsuya,

Please let us know the name of this company.

This is a customer service issue and if this is the way that this company handles criticism, I want to be darn sure I never have an occasion to use their services. Irregardless of whether you are in the right or the wrong, and the quality of their service, their response to a customer service issue speaks volumes about their company.

There have not been code requirements for the radiotelephone operators permits (at least not in my memory). For the trivial aviation use you can get by with a restricted radio telephone license which is available just by filling out the postcard form.

Thanks for the info. I am interested in talking with my uncle who flies European routes for Delta. Would this be legal for an private person to communicate with an airplane pilot?

Local news reports that the group is flashing "SOS" in morse by turning off and on room lights. The FBI says it doesn't mean a thing, just as the

banners don't mean a thing.
